

1

You have added a basic consumer application that will be modified to fit your requirements. Now, do the following:

1. Open a new terminal.
2. Create a `user_socket` using the appropriate `mix` command.
3. Add the socket handler in the `/usercode/consumer/lib/consumer_web/endpoint.ex` file.

If you need any help, click the “Show Hint” button below:

2

Run the `mix phx.gen.socket` command in the `consumer` directory.

3

If you're unsure about how to create a socket, click the "Show Solution" button below:

- Run the following commands:

```
cd /usercode/consumer
mix phx.gen.socket User
```
